# Substrates

- Specialty Media Swatchbook
- 72 alphabetical samples

# Metrology

Spectrophotometer

Glossmeter

Profilometer

Multi-Angle Imaging

Thickness

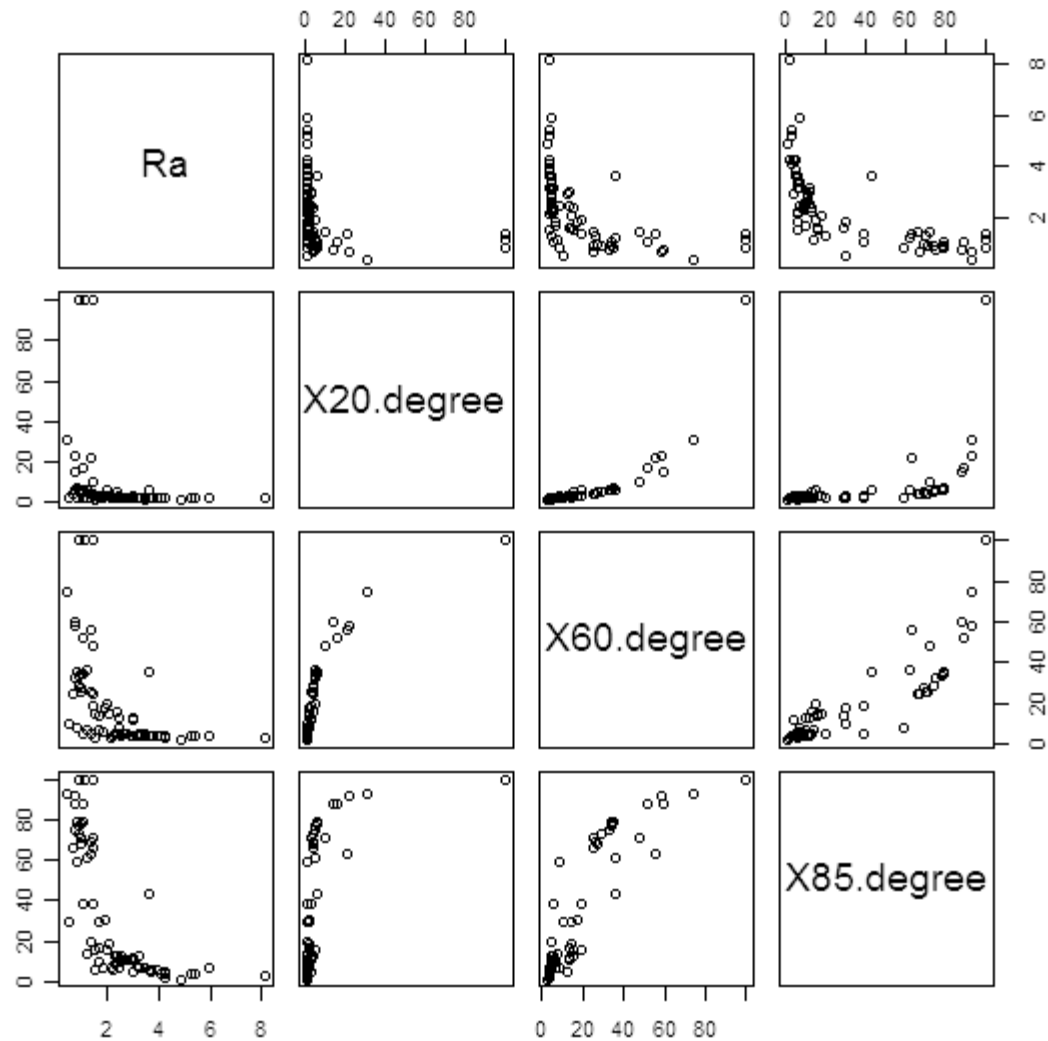

Fluoresence

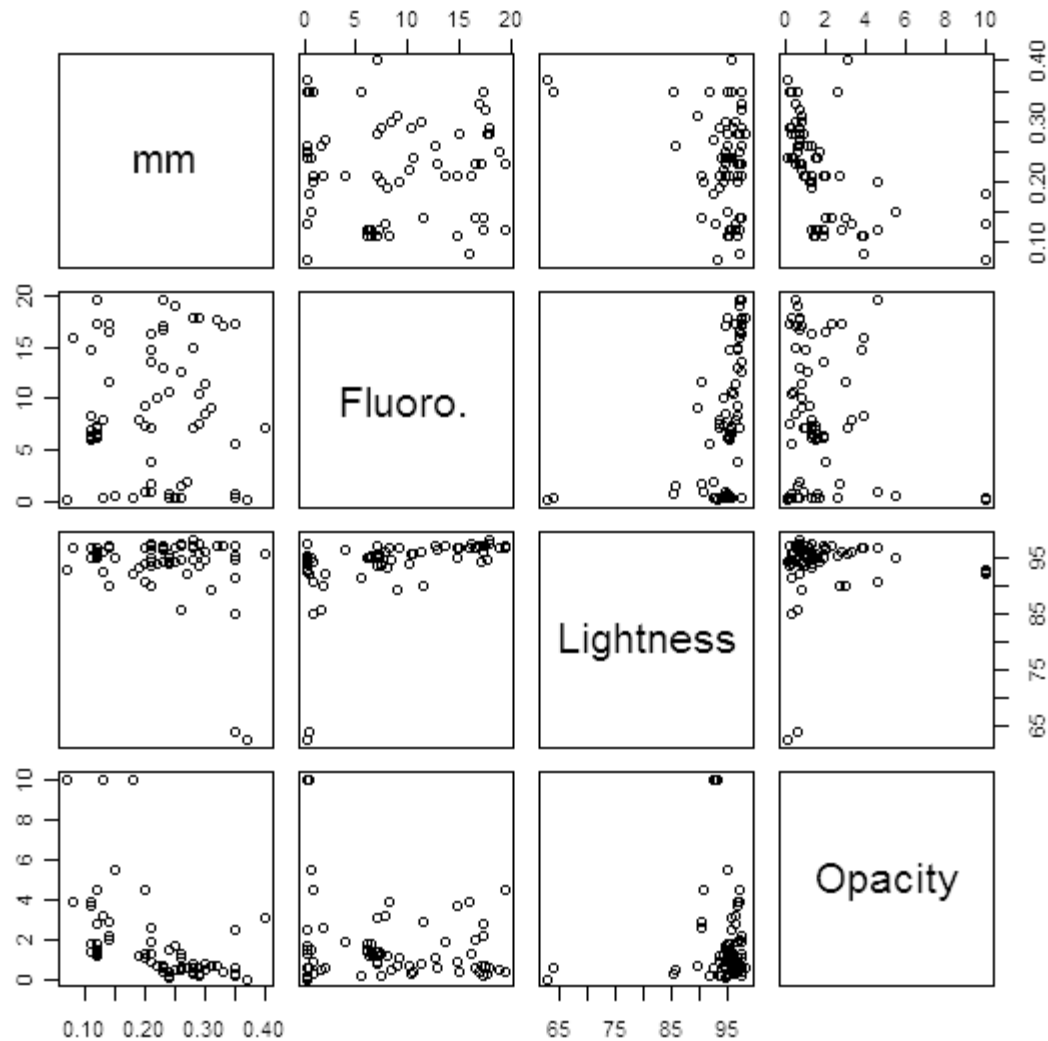

Opacity

# Roughness vs. Gloss

# Thickness, Fluorescence, Lightness & Opacity

# Are Ratio Scales Longer?

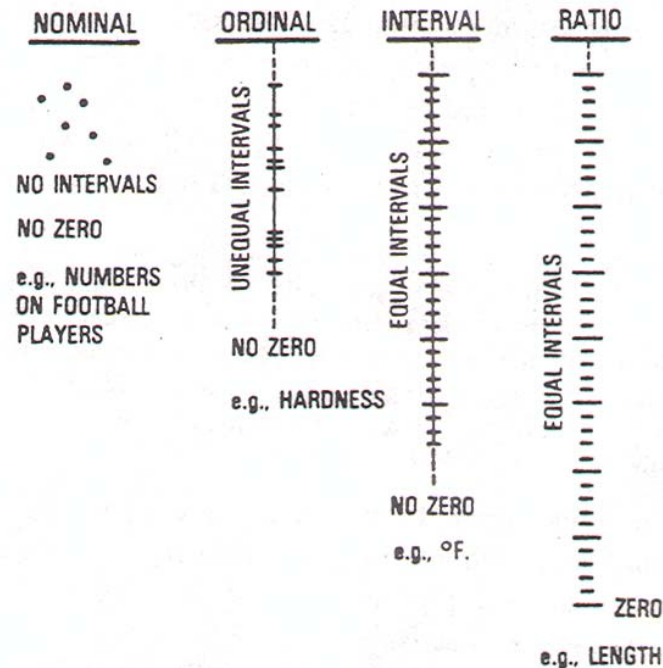

Fig. 2. Various measurement scales. A *nominal scale* merely uses numbers instead of names to distinguish among members of a group. An *ordinal scale* is derived from the operating of rank-ordering and gives no information about the meaning of distances along it. An *interval scale* is derived from the use of operations capable of specifying the equality of intervals and differences, so that equal distances anywhere along the scale have the same significance. A *ratio scale* is an interval scale with a zero point; equal ratios as well as equal intervals have the same meaning everywhere along this scale.

# Nominal Scaling Undignified?

- “...until the phenomena of any branch of knowledge have been subjected to measurement and numbers, it cannot assume the status of dignity of a science”
  - Sir Francis Galton,  
*Psychometric Experiments*, (1875)

Father of  $\sigma$  and psychometric experiments

# Media Corpus Experiment

Visual

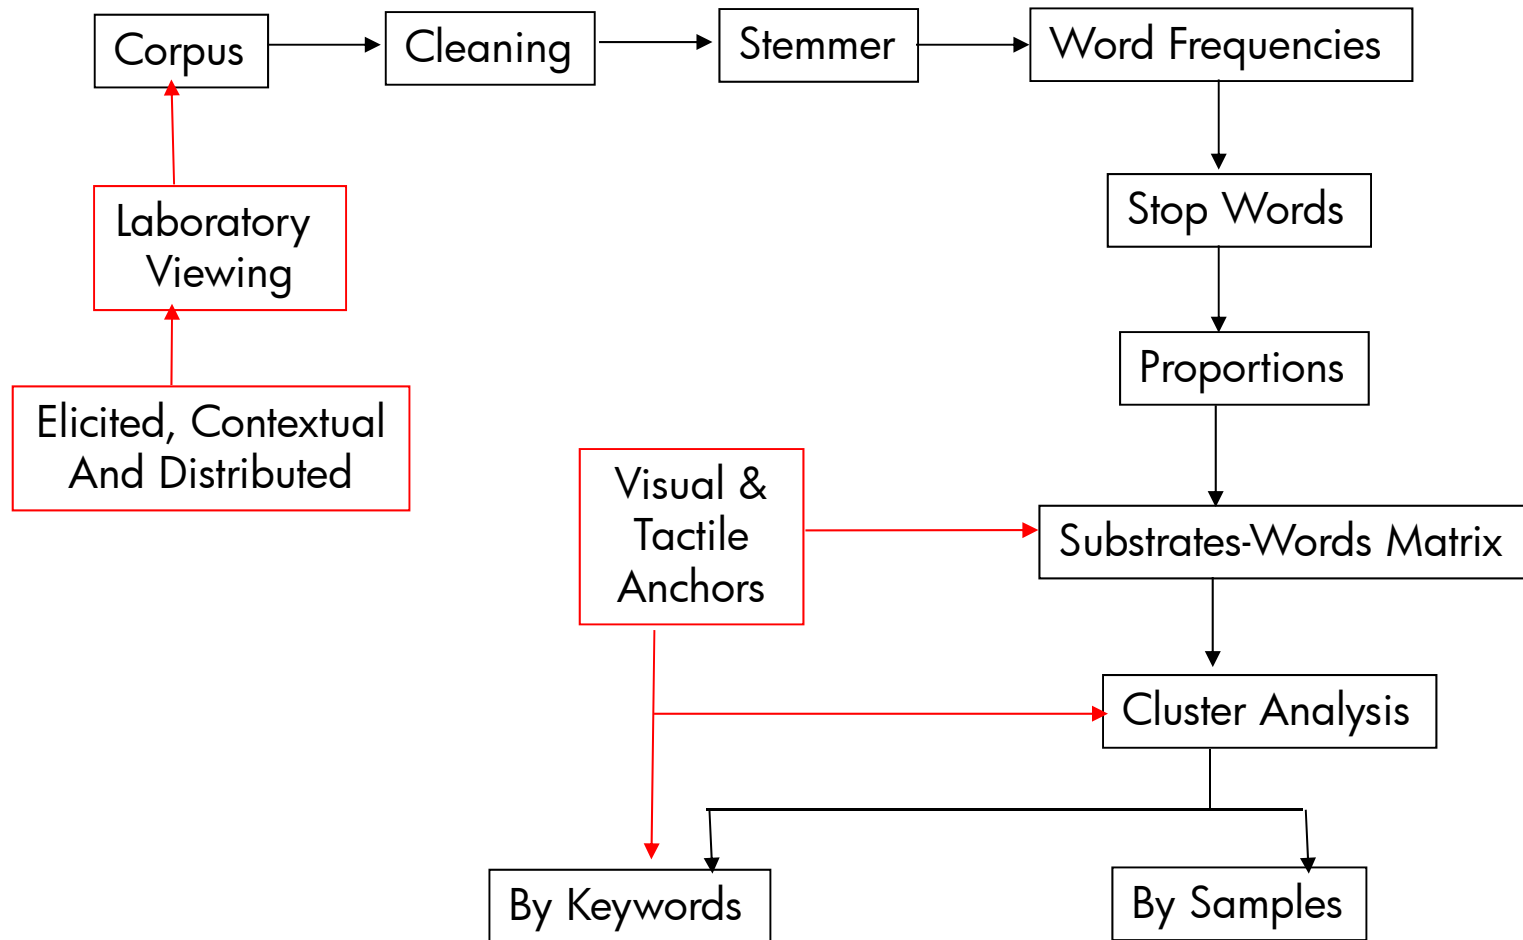

Tactile

“...choose best words or phrases to describe the visual and tactile properties of the sample...”

# Dendrograms

Recursive pair-wise visualization  
of a distance matrix.

40 U.S. cities. Neighboring branches are closer.

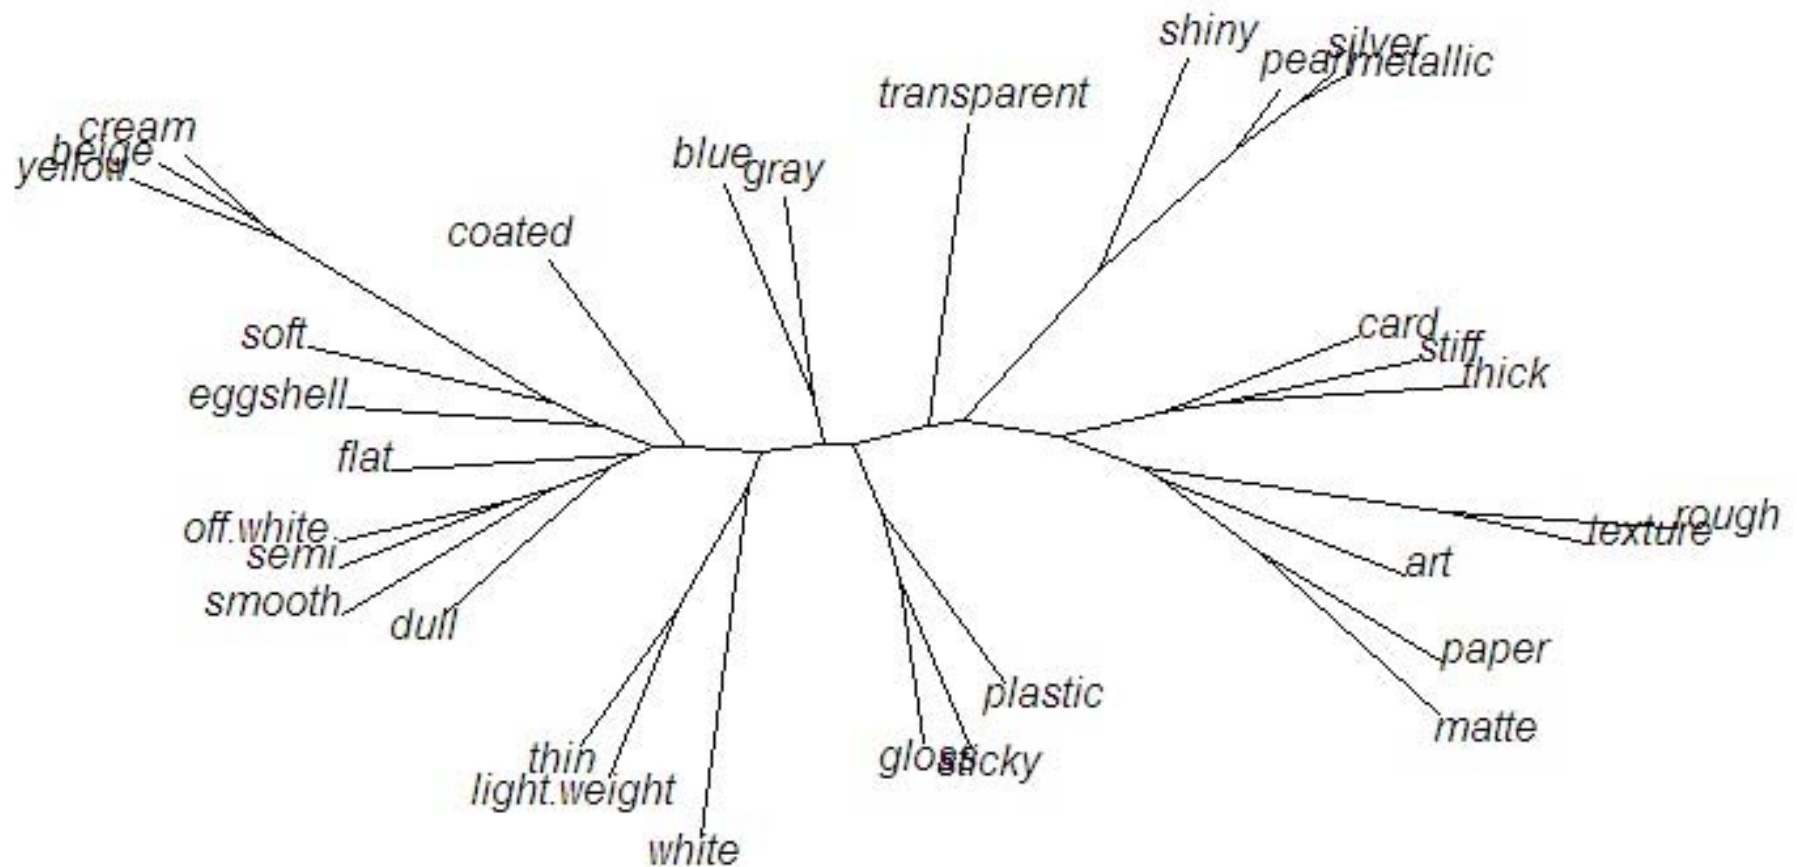

# Clustering by Word

Top 64 words agglomeratively clustered using Kendall's tau for the correlation matrix.

# Unrooted Phylogentic Tree

Minimize the length of the branches.

Top 32 Keywords, 25% also in online color naming experiment.

# Clustering by Substrate

Height

Dull, Semi-Gloss, Papers

Thicker, Glossy Papers

# Textured Papers

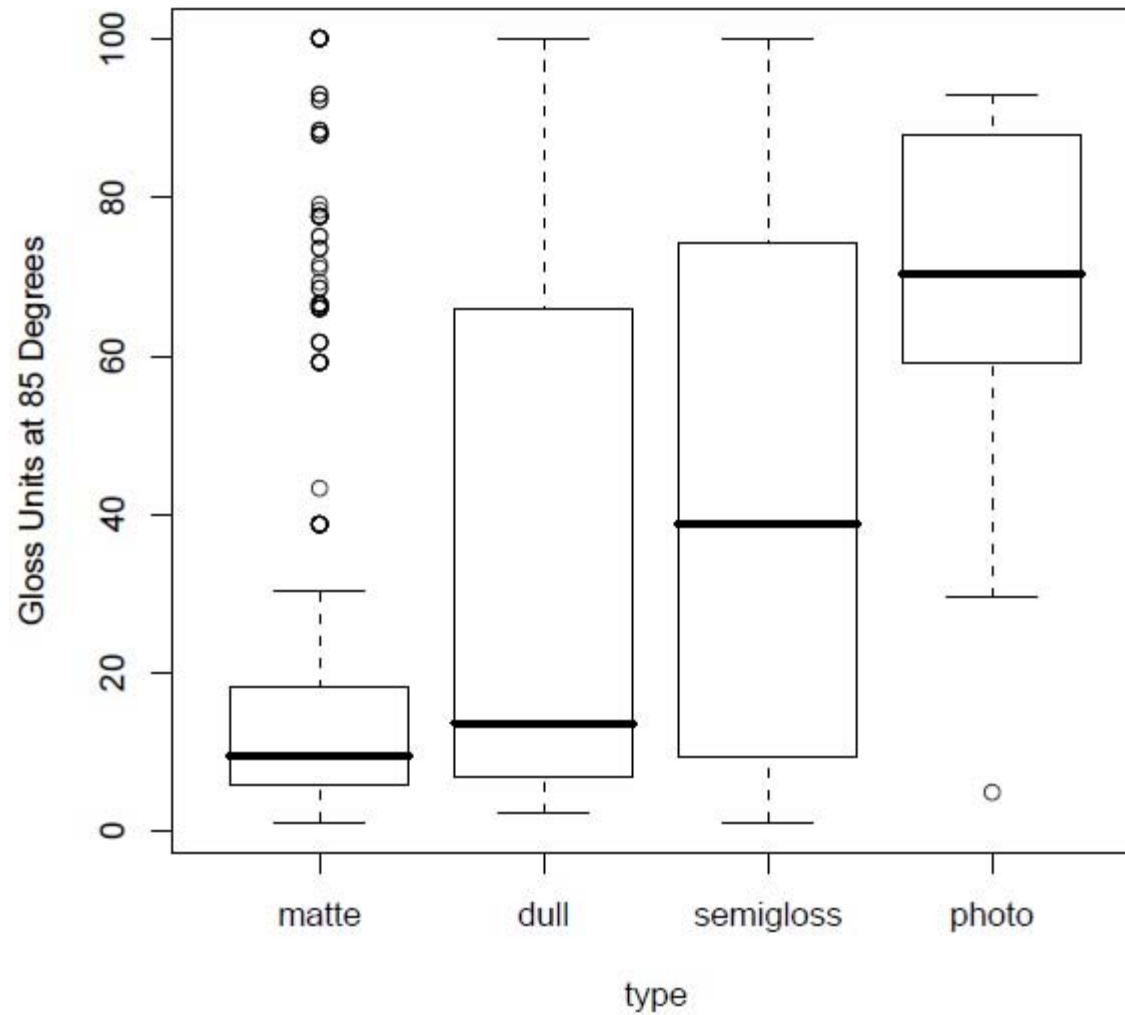

# Transparent and Metallic Media

# Words vs. Measurements

# Summary

- Anchored elicitation of unconstrained natural language descriptions of the visual and tactile perceptual properties of print substrates can be used to create a clustering of samples by word and vice versa.
- Consider the rehabilitation of nominal scales?
